

# DATASET OVERVIEW

MADE BY: NADIJA KIŠMETOVIĆ, ZALA KOPAČ AND ANNA **BENEŠOVÁ**

# WHICH ONE DID WE CHOOSE?

- BFI and BFI-closeness dataset
- WHAT IS BFI?

# BFI QUESTIONNAIRE

- The questionnaire consists of 44 items:
  - Subdimensions are **extraversion**, **conscientiousness**, **agreeableness**, **neuroticism**, and **openness**
- Each statement is rated on a five-point scale from 1 (strongly disagree) to 5 (strongly agree).
- *The BFI-closeness is completed by a person who knows the participant well and is close to them (a relative, friend, etc.), answering questions and evaluating the participant's personality traits.*

# BASIC DESCRIPTION OF THE DATASET

- Link is available [here](#):
- **187** respondents
- **88** items that are all in ordinal type (Likerts scale is used)
- No missing or suspicious values

# PARTICIPANTS

- Subjects are psychology students at their 2nd year of Bachelor's
- They were asked to fill a questionnaire during one of the subjects (Personality) during practical classes
- We have dataset of five different generations (from year 2019/2020 to year 2023/2024)
- We also have data about their birth city
- Every student should have participate only once

# SUGGESTIONS FOR ANALYSING

- Comparison between BFI and BFI-closeness
- Comparative analysis between Eastern and Western Slovenes (Do they differ in personality traits?)
- Do certain traits predicts our well-being? (If so which ones and how much?)

The background is a blue gradient with decorative white circuit-like lines in the corners. The lines consist of straight segments and small circles, resembling a stylized electronic circuit board.

THANK YOU FOR YOUR ATTENTION!
